$30.60

© 2022, FROG SHOP

home.php

This e-shop sells decoration products related to frogs. The image above is the main page, the first view clients have when they access the web. When not usual clients access the page, they will see the "Login" button. Otherwise we would see the "Logout" option when users are logged in.

Moreover, when we click the so-called "Home" button, we see this page again.
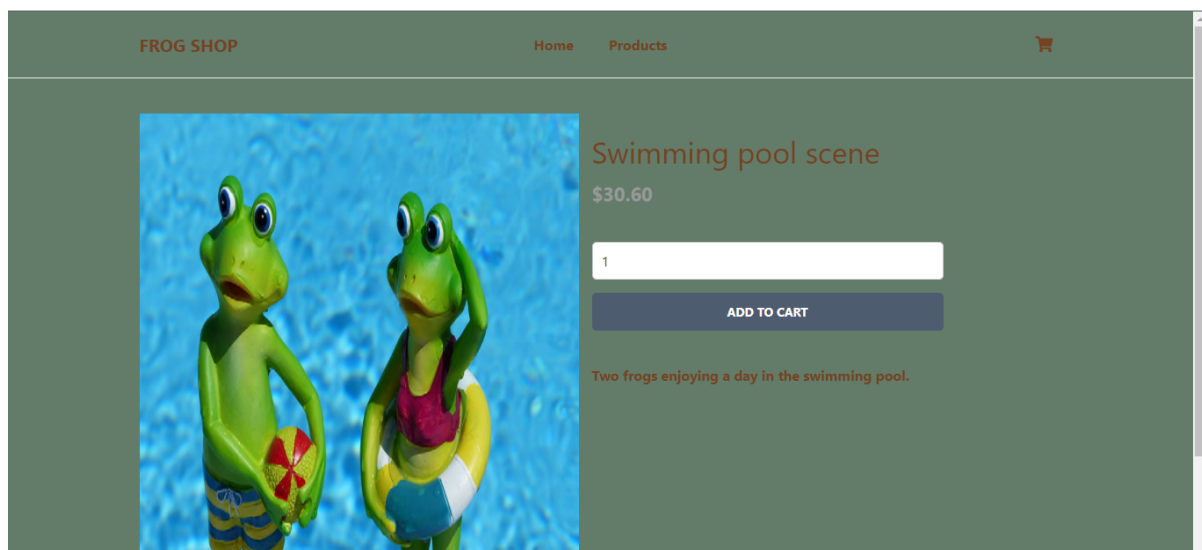

PRODUCTS:

products.php

The next page displays the products available, right now there are only four. If there were more, four would be displayed in the home page, and every item would be in the products page (this one).

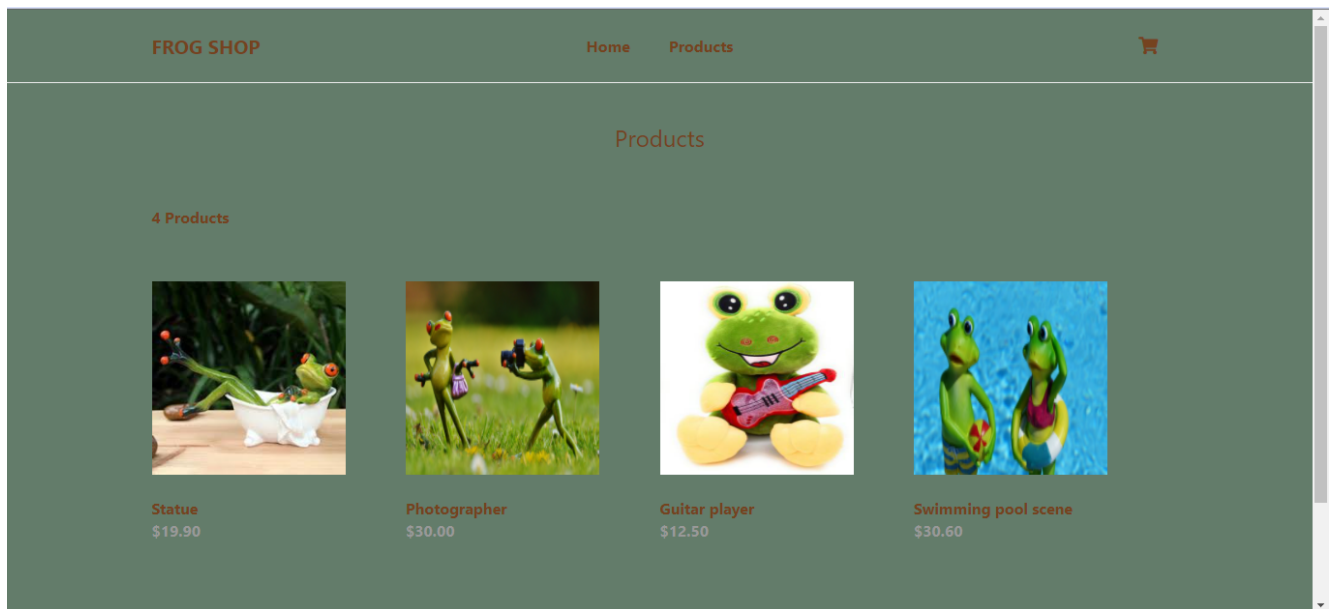

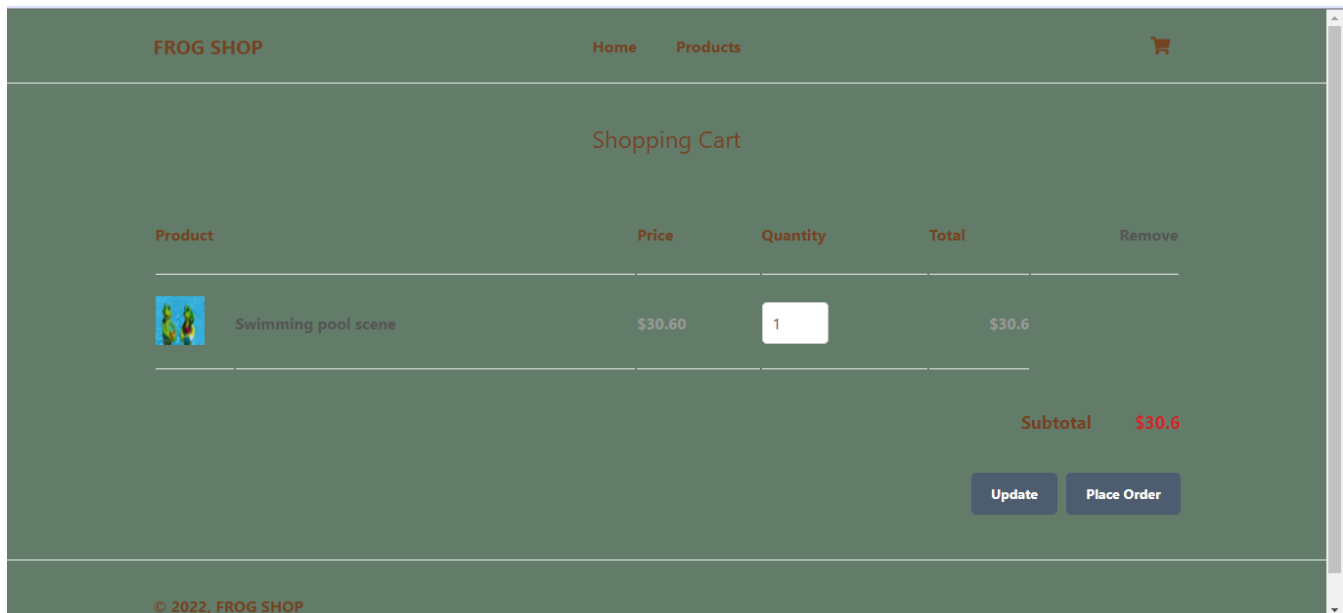

PRODUCT:

product.php

When you click on one of the products, it goes to the product page where you can see the product bigger and are able to add it to the shopping cart.

CART:

cart.php

This section simply displays the products selected to buy. We can change the quantity of items we want to buy; for example two statues of a frog bathing instead of one (clicking then after the "Update" button), or click the "remove" option to delete an item from the shopping cart.

FINAL ORDER:

finalorder.php

When a user clicks the "Place Order" option, a message will appear indicating that everything has been done correctly.
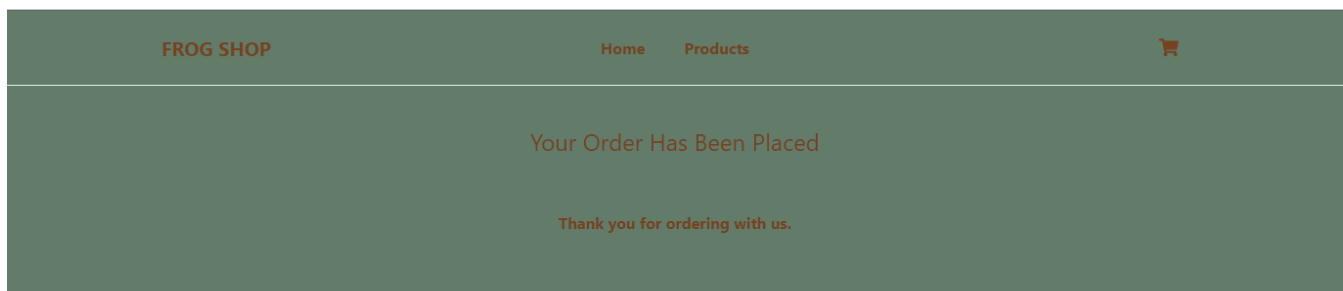

LOG IN:

login.php

On the other hand, when a person that hasn't logged in clicks on the "Place Order" option, the page automatically redirects them to the Login page. Just introducing the username and the password would be enough. There's also the "Sign up now" option that redirects you to the register page.

REGISTER:

register.php

This page let's the client register in the system by introducing just a password and a username. Checks if the username is taken, and that the password is at least six characters long.

OTHER:

Apart from the main image of the webpage, there are also other aspects worth mentioning in the code.

index.php : Connects to the database for the products table and redirects to the home page.

config.php: Connects to the database for the user information.

templates.php: Includes two templates that are displayed on every page. The header template for the main icons, and the footer template with the year and the shop name.

logout.php: Simply includes the logout code.

style.css: The cascading style sheet.
